JOIN US FOR KINDERGARTEN ENRICHMENT 2018-2019:

BookWorms

A Literacy Enrichment Program

Our most popular enrichment class! BookWorms is designed to increase children's love for literature and authors while enriching their language arts skills and other subject areas within the Kindergarten Common Core Standards. This class focuses on identifying and comprehending the important building blocks of literacy and language including word families, rhymes and sight words through popular authors and illustrators. Each week, students are engaged in project-based literacy and art activities related to the chosen story.

The children will have opportunities to explore language arts, science and math through literature as they focus on classic authors and their writing style; (i.e. Eric Carle, Leo Lionni, Jan Brett)

The children will develop and explore their knowledge of environmental words, sight words and rhyming words in their world. Art and illustration will be explored as the children focus on classic illustrators and learn how to illustrate and write their own books and journals. The curriculum emphasizes the child's role as an active learner and gives each student the opportunity to engage in hands on reading and writing activities.

An increased understanding as well as an appreciation for the timeless arts of music, poetry, drama and rhyming in literature will be developed and explored.

Discovery Kids World

A Social Science, Math and Science Enrichment Program

Each month students will visit a different country learning about its geography, science, engineering, technology and art culture meeting the S.T.E.M. Common Core Standards for Kindergarten. Literacy activities related to each country are woven into each lesson. Each week, students are engaged in project-based activities in small groups. Classes naturally flow from one to another (an Australian geography lesson flows into the science lesson on the Great Barrier Reef/aquatic life!)

Science and Math activities will channel students enthusiasm in a high-energy, hands-on manner designed to boost their inherent interest and spark the imagination! The curriculum emphasizes the child's role as an active learner and experimenter, allowing students to learn by doing, and explores science and math concepts through exciting, age-appropriate experiments!

Students will embark on a learning expedition, journeying across the world and recording their experiences in their travel log. Students "explore" different locations via books, maps, cultural cuisine, native dress, and art, which are brought to life in the classroom, sparking imagination and fostering a love for travel and culture.

Each month a special artist is introduced to the children to incorporate their interest in the art culture of the country they are studying.

With each country, children will see the similarities and differences of how people live and what they experience whether it's through video, music, food, games or even doing an experiment. Critical thinking and problem-solving skills will be particularly emphasized during science. Development of overall communication and social skills are experienced through small groups and an open dialogue is experienced during circle time.

Classes begin the week of September 17, 2018
